TEMPLATE + WORKED SAMPLE

Dashboard Requirements Business Alignment

Sample case: Consultation-to-Sales Dashboard
Module of the in-house desktop application

Purpose: (1) guide for the developer (2) agreed reference for what is (and is not) included (3) sign-off record that management agrees with the requirements

DOCUMENT ID	**DRS-C2S-001**
VERSION	**v0.1 (Draft)**
STATUS	**Draft → In Review → Signed-off**
PROJECT OWNER	**[Name, role]**
PREPARED BY	**[Name]**
REQUIREMENTS GATHERED FROM	**[Management stakeholders — names]**
DATE CREATED	**[DD/MM/YYYY]**
TARGET SIGN-OFF DATE	**[DD/MM/YYYY]**

Confidential — internal use only.

How to use this document

This document captures **what management wants from the dashboard, in business terms**, so everyone agrees before building starts. Technical details (how data is pulled, how screens are built) are left to the developer and are not part of this sign-off.

It is a **template filled in with an example** (a Consultation-to-Sales dashboard). Replace the example with the real content before sign-off.

You will see	Meaning	Before sign-off
Blue GUIDANCE box	What this section should cover and what to ask management.	Delete.
▸ **EXAMPLE**	Worked example for the Consultation-to-Sales dashboard.	Replace with the real content.
[Square brackets]	Something still to fill in: a name, date or number.	Fill in.
TBD	A decision still needed. Listed in Section 9.	Decide (the adjustment rate can stay TBD — see Section 10).

10. Changes After Sign-off 9

11. Sign-off 10

1. Purpose

GUIDANCE — WHAT TO CAPTURE IN THIS SECTION (delete before sign-off)

› Explain in two or three sentences why this document exists and that signing it is a commitment.

▸ EXAMPLE — Consultation-to-Sales Dashboard

This document records what management needs from the Consultation-to-Sales dashboard. It will be used to:

- **Guide the developer** on what to build.
- **Be the agreed reference.** If something is not written here, it is not included. Requests made verbally or by message need to go through the change process in Section 10.
- **Record agreement.** Signatures in Section 11 confirm that management has reviewed and agreed to the content.

2. Background and Goals

GUIDANCE — WHAT TO CAPTURE IN THIS SECTION (delete before sign-off)

› What is the problem today? What decisions is management unable to make easily?

› What should be different once the dashboard exists? Write goals as decisions or actions, not features.

▸ EXAMPLE — Consultation-to-Sales Dashboard

2.1 Today

Consultation results are compiled manually in spreadsheets each week. Management cannot easily see how many confirmed patients actually turn up, how many go on to sign up, or where and why patients are lost. Figures are sometimes questioned because different people count differently.

2.2 What management wants to achieve

Goal	So that management can…
See show-up and sign-up results at a glance, updated daily	Spot a bad week early instead of at month-end.
See where patients drop off — before or after the consultation	Decide whether to focus on reminders or on consultation/sales skills.
Compare consultants, branches, lead sources and time slots	Coach the right people and put marketing money where paying patients come from.
Get a list of patients to follow up	Call no-shows and undecided patients within [48] hours.
Stop the manual weekly spreadsheet	Save about [X] staff hours per week.

2.3 How we'll know it worked

- Management uses the dashboard (not the spreadsheet) in the weekly meeting within [4] weeks of launch.
- Numbers for a chosen test month match the manually checked figures.
- The follow-up team works from the dashboard's follow-up list.

3. What Is Included and Not Included

GUIDANCE — WHAT TO CAPTURE IN THIS SECTION (delete before sign-off)

› Be explicit about what is **not** included. This is the section that prevents misunderstandings later.

▸ **EXAMPLE — Consultation-to-Sales Dashboard**

Included (this phase)	Not included (possible later phase)
• One dashboard in our desktop app with the 8 sections in Section 6 • Filter by period, branch, consultant, lead source and service • Comparison with last period and with targets • Follow-up list of patients behind each number • Past data from [DD/MM/YYYY]	• Forecasts and 'what if' scenarios • Automatic alerts or notifications • Marketing spend and cost-per-patient • Mobile version • Side-by-side branch comparison screen • Treatment progress after sign-up

4. People Involved

GUIDANCE — WHAT TO CAPTURE IN THIS SECTION (delete before sign-off)

› List who gives requirements, who uses the dashboard and who signs. Name **one person who makes the final call** when opinions differ.

▸ **EXAMPLE — Consultation-to-Sales Dashboard**

Role	Name	Involvement	Signs off?
Management sponsor	[Name]	Final decision-maker on scope and priorities.	Yes
Project owner	[Name]	Owns this document; approves changes.	Yes
Developer	[Name]	Gathered requirements; builds the dashboard.	Yes
Consultation / Sales manager	[Name]	Main user; sets sign-up targets.	Yes
Clinic operations manager	[Name]	Sets rules for attendance and rescheduling.	Yes
Marketing	[Name]	Uses lead source insights.	Optional

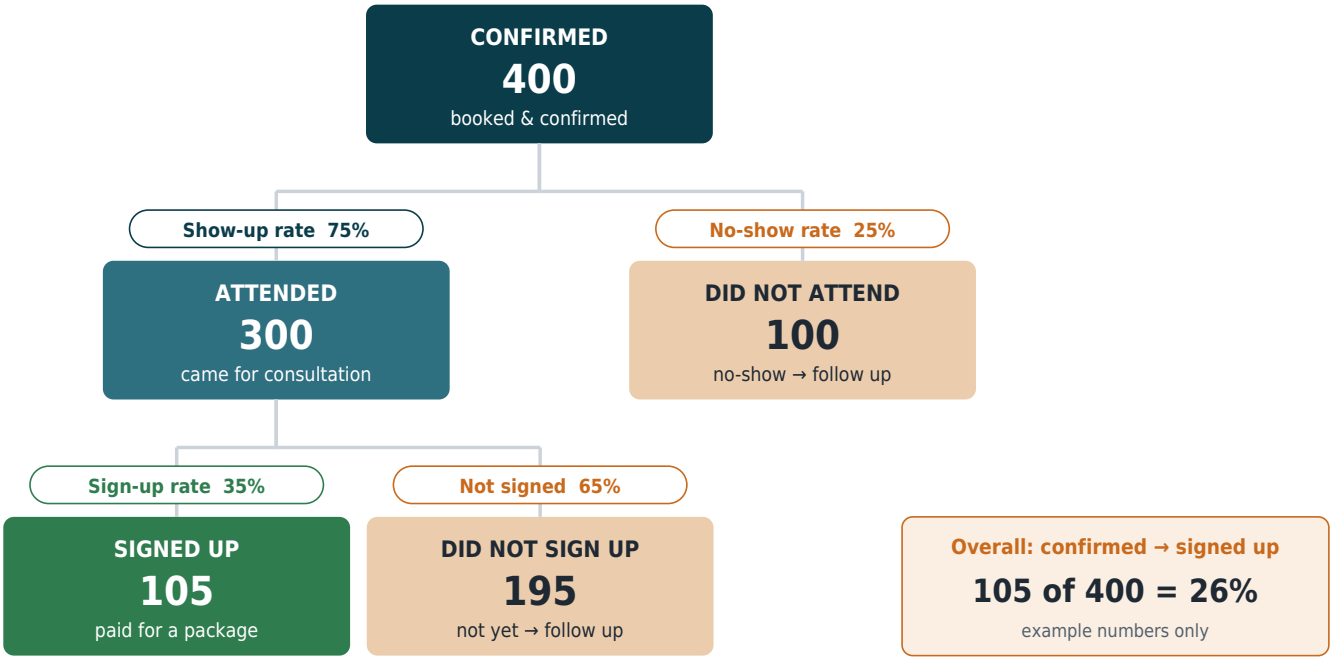

5. The Patient Journey and What Each Step Means

GUIDANCE — WHAT TO CAPTURE IN THIS SECTION (delete before sign-off)

› Draw the journey and agree what each word means. **Most disagreements about dashboard numbers come from people defining the same word differently**, not from mistakes.

› For each step, ask: when exactly does a patient count here? What about cancellations, reschedules, walk-ins, late payments?

▸ **EXAMPLE — Consultation-to-Sales Dashboard**

What we mean by…

Term	Agreed meaning	Special cases	Status
Confirmed	Patient has a confirmed consultation appointment in the system.	Confirmed by WhatsApp but not updated in the system does not count — staff must update the system.	Agreed
Attended	Patient checked in on the appointment day.	Came but left before being seen: [attended or not?]	TBD
Did not attend (no-show)	Confirmed but did not check in, and did not cancel or reschedule beforehand.	Cancelled after the appointment time = no-show.	Agreed
Cancelled / rescheduled	Cancelled or moved before the appointment time.	Not counted as no-show. Rescheduled patients count on their new date.	Agreed
Signed up	Attended patient who paid (deposit or full) for a package within **[14] days** of consultation.	Pays after [14] days: shown as 'late sign-up'. Refund soon after: [still counted?]	TBD
Did not sign up	Attended but no payment within [14] days.	Recent consultations show as 'still deciding' until the [14] days pass.	Agreed
Walk-in	Attended without a prior appointment.	[Include in attendee numbers or show separately?]	TBD
Periods	Week = Monday–Sunday; month = calendar month; counted by appointment date.	—	Agreed

6. What the Dashboard Must Show

GUIDANCE — WHAT TO CAPTURE IN THIS SECTION (delete before sign-off)

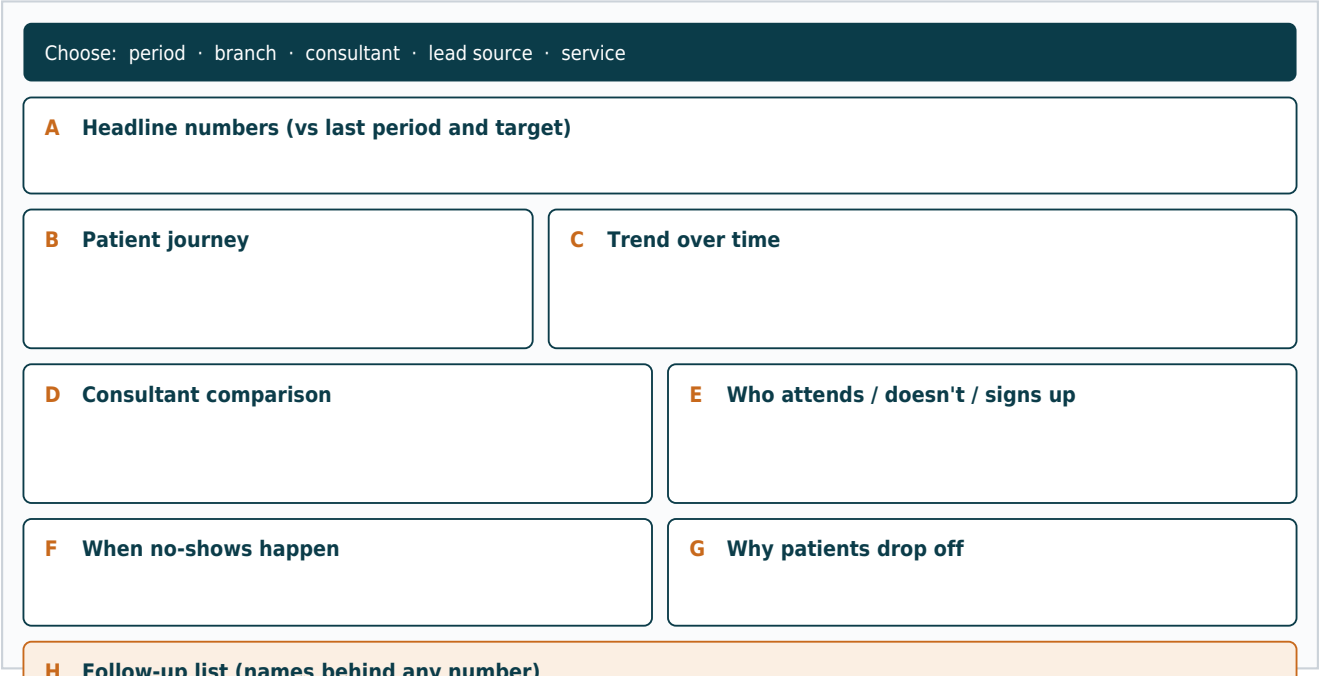

› Turn each thing management asked to track into a dashboard section, then list the **questions management will ask themselves when looking at it**. The developer builds each section so those questions can be answered at a glance.

› When collecting questions, ask management: *What would make you worried? Compared with what — target, last month, another branch? After you see that, what do you want to look at next? What action would you take?*

› If a section answers no question, remove it. If a question has no section, add one or move it to 'not included'.

▸ EXAMPLE — Consultation-to-Sales Dashboard

Management asked to track: confirmed → attended, confirmed → not attended, attended → signed up, attended → not signed up, and who signed up, who attended and who did not attend. These become the sections below.

A. Headline numbers

What it shows	Confirmed, attended, show-up %, no-show %, signed up, sign-up %, overall confirmed-to-signed-up %, and sales value (RM). Each compared with last period and with target (green / amber / red).
Questions it must answer	• How many consultations did we confirm this month — more or less than last month? • Is our show-up rate on target? • Of everyone who confirmed, how many ended up paying? • How much sales value did consultations bring in?

B. Patient journey

What it shows	The journey in Section 5 with numbers and % at each step, and how many patients were lost between steps.
Questions it must answer	• Are we losing more patients before the consultation or after it? • How many patients, in actual numbers, did we lose at each step?

C. Trend over time

What it shows	Show-up % and sign-up % by day, week or month, against target. Important events (campaign launch, price change) can be marked.
Questions it must answer	• Is show-up improving or getting worse over the last 3 months? • Did results change after the campaign / price change? • Are there seasonal dips (festive season, school holidays, month-end)?

D. Consultant comparison	
What it shows	For each consultant: patients seen, show-up %, sign-ups, sign-up %, sales value. Consultants with very few patients are marked so they are not judged unfairly.
Questions it must answer	• Which consultant converts attendees into sign-ups best? • Is a low result the consultant's performance, or did they get weaker leads? • Whose patients no-show the most — are reminders being done?

E. Who attends, who doesn't, who signs up	
What it shows	Three breakdowns — attendees, non-attendees and signed-up patients — by branch, lead source, age group, gender, area, new vs returning patient, service interest and (for sign-ups) package and payment type.
Questions it must answer	• Who actually shows up — which age group, gender, area? • Which lead source has the highest no-show rate? • Which lead source brings paying patients, not just attendees? • Which packages are most popular, and which bring most value? • How are payments split between full, deposit and instalment?

F. When no-shows happen	
What it shows	No-show rate by day of week and time slot, and by how far ahead the booking was made.
Questions it must answer	• Which days and time slots need an extra reminder call? • Do patients who book far ahead no-show more?

G. Why patients drop off	
What it shows	Main reasons for not attending and for not signing up. **Needs new recording by staff — see Section 7.**
Questions it must answer	• Why don't attendees sign up — price, need to discuss with family, comparing options? • What are the main no-show reasons, and can we fix them?

H. Follow-up list	
What it shows	The list of patients behind any number (e.g., 'attended but not signed up this week'), for the follow-up team to call.
Questions it must answer	• Who exactly should we call back this week? • Can the follow-up team take this list to work from?

Questions management raised that are not answered in this phase

Question	Why not now
If show-up improved by 5%, how many more sign-ups would we get?	Forecasting is not included (Section 3).
How does Branch A compare with Branch B side by side?	Can be viewed one branch at a time; side-by-side screen is a later phase.

7. What the Business Needs to Provide or Change

GUIDANCE — WHAT TO CAPTURE IN THIS SECTION (delete before sign-off)

› A dashboard is only as good as what staff record. List anything the business must **provide** (targets, lists, decisions) or **start doing** (new recording steps) for the dashboard to work.

› Give each item an owner and a date. New recording steps should start a few weeks before launch, otherwise those sections will be empty.

▸ **EXAMPLE — Consultation-to-Sales Dashboard**

What is needed	Why	Owner	By when
Front desk records **check-in for every patient**, every time	Show-up numbers are wrong if check-ins are missed	[Ops manager]	[date]
Staff update appointment status in the system (confirmed, cancelled, rescheduled) — not only on WhatsApp	Otherwise confirmed patients are undercounted	[Ops manager]	[date]
Consultants select a **reason for not signing up** after each consultation (price, family decision, comparing options, not suitable, timing, other)	Needed for Section G	[Sales manager]	[date]
Follow-up team records a **reason for no-show** after calling (forgot, transport, work clash, changed mind, unreachable, other)	Needed for Section G	[Ops manager]	[date]
Lead source filled in for every new enquiry	Needed for Section E comparisons	[Marketing]	[date]
Monthly **targets** for show-up % and sign-up % (per branch if different)	Needed for green/amber/red in Sections A and C	[Sponsor]	[date]
Up-to-date list of branches, consultants, packages and services	Needed for filters and breakdowns	[Owner]	[date]
Access to the appointment, clinic and payment systems for the developer	Dashboard pulls data from these	[System owners]	[date]

8. Who Can See What

GUIDANCE — WHAT TO CAPTURE IN THIS SECTION (delete before sign-off)

› Agree who sees all branches, who sees patient names and phone numbers, and who can download lists. Patient information is sensitive personal data under PDPA 2010 — check with whoever handles data protection.

▸ **EXAMPLE — Consultation-to-Sales Dashboard**

Group	Sees	Patient names & phone numbers	Can download lists
Management	All branches	Yes	Yes
Branch managers	Own branch only	Yes (phone partly hidden)	Yes
Follow-up team	Assigned branch	Yes — needed for calling	Yes
Marketing	All branches, totals only	No	No
Consultants	[Own results only / no access?]	No	No

9. Decisions Still Needed

GUIDANCE — WHAT TO CAPTURE IN THIS SECTION (delete before sign-off)

› Every TBD in this document goes here with an owner and date. All must be decided before sign-off, except the adjustment rate.

▸ EXAMPLE — Consultation-to-Sales Dashboard

#	Decision needed	Who decides	By when	Decision
1	Count a sign-up if payment is within 14 days or 30 days of consultation?	[Sales manager]	[date]	[ ]
2	Patient came but left before being seen — attended or no-show?	[Ops manager]	[date]	[ ]
3	Include walk-ins in attendee numbers?	[Sponsor]	[date]	[ ]
4	Does a sign-up refunded shortly after still count?	[Finance]	[date]	[ ]
5	Can consultants see their own results? Each other's?	[Sponsor]	[date]	[ ]
6	How far back should past data go — 6 or 12 months?	[Owner]	[date]	[ ]
7	Adjustment rate for changes after sign-off	[Name]	[date]	Can remain TBD at sign-off

10. Changes After Sign-off

GUIDANCE — WHAT TO CAPTURE IN THIS SECTION (delete before sign-off)

› Explain simply how changes are requested and approved, so small tweaks stay easy and big changes are visible.

▸ EXAMPLE — Consultation-to-Sales Dashboard

- Once signed, this document is the agreed baseline. Changes are welcome but must be **requested in writing** to the project owner.
- The developer explains the effect on time (and cost, once the rate is set). The project owner approves — or the management sponsor for large changes.
- If the dashboard does not match this document, fixing it is **not** a change — it is corrected at no charge.

Size	Examples	Adjustment rate
Small	Wording, colours, order of items, default filter	**TBD**
Medium	A new filter or a new breakdown in an existing section	**TBD**
Large	A new section, a new data source, or **changing a meaning in Section 5** (e.g., 14 days → 30 days)	**TBD**

Adjustment rate to be defined by [Name] by [DD/MM/YYYY]. Until then, change requests are recorded and assessed but only started with written approval.

11. Sign-off

> By signing, I confirm that I have read **DRS-C2S-001 version 1.0** dated [DD/MM/YYYY], that the goals, meanings (Section 5), dashboard sections (Section 6) and scope (Section 3) reflect what management needs, that anything not written here is not included, and that changes after today follow Section 10.
